

**TAKE
YOUR
WAVERUNNER
TO THE
NEXT LEVEL**

WaveRunner is a trademarked name and type of watercraft produced by Yamaha from 1986. Products in the WaveRunner line also include the Yamaha WaveBlaster and Yamaha SuperJet.

Yamaha currently produces four different series of WaveRunners. They are EX Series, VX Series, FX Series, Performance Race Series and SuperJet.

At Maptun Powersports VTECHTUNED, we are continually working on developing new hardware and software to let you experience the thrills of riding your Yamaha watercraft at its full potential. For many years we have been working with the engine control system that is installed in Yamaha vehicles and that gives us a good understanding of its functions, features and capabilities.

At present, we can offer a wide range of different tuning kits and also some diagnostics functions, everything to give you the best possible experience together with your Yamaha.

When you choose Maptun, you can optionally purchase your own MaptunerX controller that enables you to easily switch between different software packages and also get free access to new software releases developed after the purchase date. Your MaptunerX will always stay up to date since it will automatically update to the latest firmware once it's connected and synchronized with our servers.

MAPTUNER[®]X

TAKE YOUR WAVERUNNER TO THE NEXT LEVEL

With over 100 retailers worldwide and extensive use of MaptunerX, we can collect the necessary data needed to customise your tuning software for optimal performance and durability – no matter where or how you drive.

MaptunerX performs a so-called reflash. In short, MaptunerX first reads the original vehicle software to analyze and look up the various parameters such as load pressure, ignition timing, fuel, various types of restrictions, etc.

These parameters are then adapted to various conditions, such as the exhaust system, air kits, diffusers, climatic conditions, etc. This is one of the most complex ways to optimize the engine software - but undoubtedly the safest!

MaptunerX always uses the original vehicle software as the originating point, which means that the engine control unit is always aware of the increased power and thus at any point can adjust the inherent safety features originally programmed instead of defeating them or, as is often the case, ignoring them.

Maptun is continually developing new features and support for new vehicles. Your MaptunerX will never become outdated because it automatically updates its firmware every time it is connected to a computer and synchronized with our server.

SPECS

20 V LED touch screen

480x272 pixel resolution

4 GB RAM

USB cable included

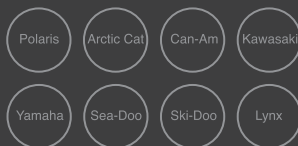

PC compatible

Can be used for an unlimited number of vehicles

Compact size, just 117 mm x 85mm

MAPTUNERX SUPPORTS NUMEROUS MAKES

MaptunerX supports Yamaha snowmobiles, watercrafts, outboards and UTVs. Other brands, including Sea-Doo, Ski-Doo, Lynx, Polaris, Kawasaki, Can-Am and Arctic Cat, are also supported. Additionally, we carry plenty of features and optimization kits for cars.

With MaptunerX, you can simply use the same device for all your vehicles!

TUNING KITS: SUPERCHARGED

This kit contains MaptunerX, USB- and Yamaha-cabling, and a STANDARD tuning license.

MaptunerX can be used for an unlimited number of vehicles; all you need is one (1) license per vehicle. Once the license has been activated for the vehicle, you gain free access to all the software plus the ability to switch between these as you like, including the original vehicle.

DIDN'T FIND YOUR YAMAHA HERE?

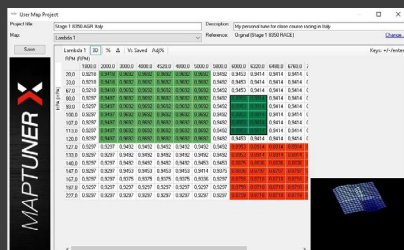

These are the most popular models. We also offer tuning upgrades for most Yamaha from 2009 and onwards, also jet boats. For all models, please visit maptunpowersports.com

APPS AND PROGRAMS

DATA LOGGER KIT

Includes software, cables and broadband lambda sensor to read values in real time and save them whilst driving. Mega Log Viewer PC application for easy analysis of your data later!

MAP EDITOR

Map Editor allows the user to create own adjustments in software such as boost pressure, throttle response, fuel, injection and more. We strongly recommend that MaptunerX Datalogger Kit is combined with Map Editor.

For PC.

ACCESSORIES

In addition to our tuning kits we also carry accessories to improve both handling and performance. From our own brand and as a retailer for Riva Racing - for a complete range of quality products for your watercraft!
